... of Watcom SQL will have a full-fledged cost-based optimizer.

Mobile versions of the *database* can be made read-only, or you can use Watcom's DBTRAN utility to convert the *transaction* *log* into ANSI *SQL* statements for updating the server *database* at a later time. Of course, this will only work if most updates are not...

...all the transactions executed by a specified user. DBTRAN also enables selective restoration of the *database* up to a certain point in time.

Still, many features found in other SQL databases...

ABSTRACT: WordPerfect Corp's DataPerfect 2.3 *data* *base* management system is under development and is scheduled for release by the end of 1992. The new version of the *flat*-*file* *database* upgrade offers a customizable menuing system, password security for local area networks (LANs) and a utility aimed at exchanging files between the *database* and the word processor. Users can now design front-end menus and submenus for each *database*. The product is better suited for network applications because it allows multiple users to create, edit and run *database* reports at the same time. Users can establish links to other *databases*. Version 2.3 also includes a *Transaction* *Log* feature, auto-dialer and Quick *Merge* Define feature. The software costs \$495; upgrades cost \$99.
